

What is claimed is:

1. A portable information terminal equipped with a plurality of application programs, a display part, and an operating part for displaying an application window on the display part, said portable information terminal comprising

an image range specifying part for specifying an image within a given range in a given application window displayed in said display portion,

a copying part for copying the image within the range specified by the image range specifying part and for allowing the copied image to remain displayed on the display portion even when the application window displayed on the display portion is changed by said operating portion, and

a pasting part for pasting the image within the specified range, remaining displayed on the display portion by the copying part, onto a window of a changed other application displayed on the display portion.

2. The portable information terminal according to Claim 1, further comprising

an image reversing part for reversing the image specified by said image range specifying part.

3. The portable information terminal according to Claim 1, further comprising:

a display form changing part for displaying the image copied by said copying part in such a manner as to

seemingly float over the window displayed on the display portion.

4. The portable information terminal according to Claim 1, further comprising:

a window displaying part for allowing an operation of said operation portion to display a plurality of application windows one after the other on the display portion in a sliding manner.

5. The portable information terminal according to Claim 4, wherein

said window displaying part displays a plurality of application windows in background colors different from each other.

6. The portable information terminal according to Claim 4, wherein

said operating part allows a dial to be rotated to slide a plurality of application windows and thus display the application windows successively on the display part.
